Ice Hockey API Data Feeds & Pricing – Complete Guide to Goalserve Hockey API

If you are building a sports website, mobile application, betting platform, or fantasy hockey solution, access to accurate and real-time ice hockey data is critical. The Ice Hockey API by Goalserve provides a comprehensive and reliable hockey data feed designed for professional use cases.

This guide explains the features, coverage, pricing, and benefits of the **Goalserve Hockey Data Feed API**.

What Is the Goalserve Ice Hockey API?

The Goalserve Hockey Data Feed API delivers live and historical ice hockey data in both XML and JSON formats, allowing seamless integration into any technology stack.

The API provides:

- Live scores and fixtures
- In-game player statistics
- Team rosters and player profiles
- Injury and suspension reports
- Head-to-head (H2H) data
- Historical statistics dating back to 2010
- Prematch and in-play betting odds
- Fantasy hockey data

This makes it suitable for live score platforms, betting operators, fantasy applications, analytics tools, and media publishers.

Ice Hockey Feed Coverage

Goalserve offers extensive global coverage of ice hockey leagues and tournaments.

Major Leagues and Competitions

- USA: NHL
- Russia: KHL
- Finland: Liiga
- Sweden: SHL

- Germany: DEL
- Czechia: Extraliga
- International competitions including World Championship, World Cup, Olympic Games, and international friendlies

This coverage ensures consistent data availability across both domestic leagues and global tournaments.
